18 CHAPEL HILL Certificate number Valid until 6 June 2031 7839-8926-2000-0133-6206 Mid-terrace house **Property type Total floor area** 50 square metres

**Energy rating** 

#### If the property is rated F or G, it cannot be let, unless an exemption has been registered. You can read guidance for landlords on the regulations and

Rules on letting this property

exemptions.

**Energy efficiency rating for this** 

Properties can be rented if they have an energy rating from A to E.

# See how to improve this property's energy performance.

Current Score **Energy rating Potential** 92+ 92 | A

This property's current energy rating is D. It has the potential to be A.

B 81-91 69-80 55-68 66 I D 39-54 21-38 1-20 The graph shows this property's current and potential energy efficiency. Properties are given a rating from A (most efficient) to G (least efficient).

Properties are also given a score. The higher the number the lower your fuel bills are likely to be.

For properties in England and Wales:

This section shows the energy performance for features of this property. The

assessment does not consider the condition of a feature and how well it is

Breakdown of property's energy performance

• the average energy rating is D

• the average energy score is 60

- working. Each feature is assessed as one of the following:
  - very poor (least efficient)
- When the description says "assumed", it means that the feature could not be
- Sandstone or limestone, as built, no insulation Wall (assumed)

Roof room(s), ceiling insulated Roof Very poor

| Window                          | Fully double glazed  | Good         |
|---------------------------------|--|--------------|
| Main heating                    | Boiler and radiators, mains gas                                | Good         |
| Main heating control            | Programmer and room thermostat                                 | Average      |
| Hot water                       | From main system   | Good         |
| Lighting                        | Low energy lighting in all fixed outlets                       | Very<br>good |
| Floor                           | Solid, no insulation (assumed)                                 | N/A          |
| Secondary<br>heating            | None   | N/A          |
| Primary ene                     | rgy use  |              |
| The primary end square metre (k | ergy use for this property per year is 261 kilowatt<br>Wh/m2). | t hours per  |
| ► What is prim                  | ary energy use?  |              |
|                                 |  |              |

**Additional information** 

Additional information about this property:

• Stone walls present, not insulated

• Dwelling may be exposed to wind-driven rain

**Environmental impact of this property** 

One of the biggest contributors to climate change is carbon dioxide (CO2).

2.3 tonnes of CO2

0.2 tonnes of CO2

£171

£3,500 - £5,500

7061 kWh per year

The energy used for heating, lighting and power in our homes produces over a quarter of the UK's CO2 emissions.

### emissions by 2.1 tonnes per year. This will help to protect the environment. Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.

By making the <u>recommended changes</u>, you could reduce this property's CO2

Making any of the recommended changes will improve Potential energy this property's energy efficiency. rating If you make all of the recommended changes, this will

improve the property's energy rating and score from D

#### Room-in-roof insulation Typical installation cost £1,500 - £2,700

Solar water heating £4,000 - £6,000 Typical installation cost **Typical yearly saving** £24 Potential rating after carrying out 78 | C recommendations 1 and 2 Recommendation 3: Solar photovoltaic panels, 2.5 kWp

The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property.

to improve this property's energy performance.

Estimated energy used to heat this property

Heating use in this property

**Space heating** 

The estimated saving is based on making all of the recommendations in how.

For advice on how to reduce your energy bills visit Simple Energy Advice.

Heating a property usually makes up the majority of energy costs.

#### Water heating 1657 kWh per year Potential energy savings by installing insulation

help to reduce carbon emissions by replacing your existing heating system

with one that generates renewable heat. The estimated energy required for space and water heating will form the basis of the payments. Contacting the assessor and accreditation scheme
